Office Action Summary		Application No.	Applicant(s)			
		10/714,179	CERVINI, STEFANO			
		Examiner	Art Unit			
		Abdullah-Al Kawsar	2195			
	The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply					
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status	•

DETAILED ACTION

1. Claims 1-7, 9-21 and 23-28 are pending. Claims 8 and 22 are canceled.

Claim Objections

2. Claims 9-14 and 23-28 are objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Claims 9-14 and 23-28 are dependent on canceled claims 8 and 22. Examiner is examining these claims as being dependent on claim 1 and 15 accordingly. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

Claim Rejections - 35 USC § 103

- 3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 4. Claims 1-3, 6-7, 9-10, 13-17, 20-21, 23-24, 27 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilkinson et al.(Wilkinson) US Patent no. 6,094,715, in view of Kubo(Kubo) US Patent No. 5,881,284.

10/714,179

Art Unit: 2195

5. As per claim 1, Wilkinson teaches the invention as claimed including an apparatus for

executing at least one single multiple data(SPMD) program in a microprocessor, said apparatus

comprising:

a micro single instruction multiple data (SIMD) unit located within said microprocessor

Page 3

(col 7 lines 25-27); and

a job buffer having an output coupled to an input of said micro SIMD unit, wherein said

job buffer based on a control flow equivalence of said jobs and allocates said task to said micro

SIMD unit (col 24, lines 53-55; col 26, lines 29-34; col 27, lines 24-34; col 29, lines 52-60)).

Wilkinson does not specifically disclose dynamically bundling jobs into a task.

6. However, Kubo teaches dynamically bundling jobs into a task (col 1, lines 56-59).

7. Therefore, it would have been obvious to a person of ordinary skill in art at the time of

invention was made to incorporate the teaching of Kubo into method of Wilkinson bundle the

jobs into a task with different control flow. The modification would have been obvious because

one of the ordinary skills of the art would have the job bundled with same control flow of data

together to be able to execute the jobs without switching different control mode and save system

resources and execution time.

8. As per claim 2, Wilkinson teaches said micro SIMD unit is capable of sending job status

information to said job buffer (col 73, lines 1-4; col 48, lines 28-30).

10/714,179

Art Unit: 2195

9. As per claim 3, Wilkinson teaches said at least one SPMD program comprises a plurality

Page 4

of input data streams having moderate diversification of control flows (col 8, lines 25-29).

10. As per claim 6, Wilkinson teaches said apparatus executes a plurality of SPMD programs

and wherein each SPMD program of said plurality of SPMD programs is executed on a number

of input data streams (col 8 lines 19-2).

11. As per claim 7, Wilkinson teaches said number of input data streams is greater than a

program granularity threshold (col 41 lines 24-36).

12. Claims 15-17, 20 and 21 are system claims of claims 1-3, 6 and 7 above. They are

therefore rejected under the same rational.

13. As per claim 9, Kubo teaches said apparatus performs job clustering to form a job bundle

in which each job in said job bundle has an equivalent control flow (col 1, lines 34-36),

14. As per claim 10, Wilkinson teaches said apparatus performs said job clustering based on

a job processing status of said jobs in said job bundle (col 21 lines 9-11).

10/714,179

Art Unit: 2195

15. As per claim 13, Kubo teaches said apparatus maximizes a size of a job cluster by selecting tasks for execution in which a job processing status of each of said tasks is complete (col 5 lines 32-39).

Page 5

- 16. As per claim 14, Kubo teaches said apparatus executes a data loading phase for a task before said apparatus executes a task execution phase for said task (col 3 lines 54-63)
- 17. As per claims 23, 24, 27 and 28, they have similar limitations as of claims 9, 10, 13 and 14 above. Therefore, they are therefore rejected under the same rational of claims 9, 10, 13 and 14 above.

Claim Rejections - 35 USC § 103

- 18. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 19. Claims 4, 5, 18 and 19 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilkinson et al.(Wilkinson) US Patent no. 6,094,715 in view of Pechanek et al. US Patent No. 6,470,441 B1.

10/714,179 Art Unit: 2195

- 20. As per claim 4, Wilkinson does not specifically discloses apparatus executes said at least one SPMD program once for each input data stream of said plurality of input data streams.
- 21. However, Pechanek teaches said apparatus executes said at least one SPMD program once for each input data stream of said plurality of input data streams (col 4 lines 62-65).
- 22. It would have been obvious to a person of ordinary skill in art at the time of invention was made to incorporate the teaching of Pechanek into method of Wilkinson to execute SPMD once for each data stream. The modification would have been obvious because one of the ordinary skills of the art would have a SPMD program execution once for each data input stream as it would reduce the latency of process execution.
- 23. As per claim 5, Wilkinson teaches said apparatus generates an instruction stream for each input data stream of said plurality of input data streams (col 8 lines 25-28).
- 24. As per claims 18 and 19, they have similar limitations as of claims 4 and 5 above.

 Therefore, they are therefore rejected under the same rational of claims 4 and 5 above.
- 25. Claims 11, 12, 25 and 26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wilkinson et al.(Wilkinson) US Patent no. 6,094,715 in view of Kubo(Kubo) US Patent No. 5,881,284, and further in view of "Multi-thread VLIW processor architecture for HDTV decoding" by Hansoo Kim(Kim).

10/714,179 Art Unit: 2195

- 26. As per claim 11, Wilkinson and Kubo do not specifically disclose forces a task to terminate at a point where a job control path might fork by placing a code-stop.
- 27. However, Kim teaches said apparatus forces a task to terminate at a point where a job control path might fork by placing a code-stop in said task (page 3, col 1, lines 3-8, "the program can entries exceeds a predefined number.")
- 28. Therefore, it would have been obvious to a person of ordinary skill in art at the time of invention was made to incorporate the teaching of Kim into the combined method of Wilkinson and Kubo to have a task termination point to switch task. The modification would have been obvious because one of the ordinary skills of the art would have a task switch to fulfill special conditions of system execution and prioritize execution.
- 30. As per claims 25 and 26, they have similar limitations as of claims 11 and 12 above. Therefore, they are therefore rejected under the same rational of claims 11 and 12 above.

10/714,179 Art Unit: 2195 Page 8

Response to Argument

- 31. Applicant's arguments filed 11/13/2007 have been fully considered but they are not persuasive.
- 32. In the remarks applicant argues that:
 - (1) Dynamically scheduling batch jobs in Kubo does not read on dynamically bundling jobs.
- 33. Examiner respectfully disagree to applicant:
 - i. as to points (1), applicant support his argument with mentioning the job being bundled based on control flow. The rejection is for 103 rejection, Wilkinson teaches having different control flow of job buffer Kubo teaches dynamically bundling the jobs. Therefore, it would have been obvious to a person of ordinary skill in art at the time of invention was made to incorporate the teaching of Kubo into method of Wilkinson bundle the jobs into a task with different control flow. The modification would have been obvious because one of the ordinary skills of the art would have the job bundled with same control flow of data together to be able to execute the jobs without switching different control mode and save system resources and execution time (see paragraph 7 above).

10/714,179 Art Unit: 2195

Conclusion

- 34. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).
- 35. A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
- 36. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Abdullah-Al Kawsar whose telephone number is 571-270-3169. The examiner can normally be reached on 7:30am to 5:00pm, EST.
- 37. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Meng Ai T. An can be reached on 571-272-3756. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
